

```
Algorithum
step1 : start
stopa: Input m, n
steps: Display enter the 1st array
       for(i=0;icn;i+t)
        input al[i]
 step4: Display enter the and array
       for(j=0; icm; i+t)
         in put az [i]
  Otops: for (i=0; icn; i++)
         if (a1[i] != 02[i])
         f=0
          break
          0/86
          f=1
          end of for.
   step 6: if (f==0)
        Display 2 array are not equal
      0/86
         Display a array are equal
  stept: stop.
```
